Kohat / Peshawar, Pakistan · +92 322-9170014 · adeelhaider3360@gmail.com · linkedin.com/in/adeelhaider3360 · github.com/Adeel-Haider-03

Full stack developer working in the MERN stack and Python. Comfortable taking a project from database schema through to a Dockerised deployment behind Nginx. Currently building and maintaining WordPress sites for paying clients while finishing a CS degree at UET Peshawar, graduating August 2026.

EXPERIENCE

Freelance Web Developer Jan 2025 – Present

Self-employed Remote

- Build and deploy WordPress sites for small businesses, working alongside one other developer. Clients include Farar Scents and Qari Fragrances, both local fragrance retailers.
- Handle the whole engagement: scoping requirements with the client, customising themes, configuring plugins, migrating content, testing, and supporting the site after launch.
- Fix the things that actually break on client sites, mostly slow page loads and layouts that fall apart on phones.

Web Developer Intern Sep 2024 – Oct 2024

Digital Empowerment Network Remote

- Built five interactive browser tools in plain HTML, CSS, and JavaScript, with no framework.
- Reworked DOM manipulation and event handling to cut unnecessary re-rendering, and fixed layout and rendering differences across Chrome, Firefox, and Safari.
- Worked in a remote Agile team, shipping in short cycles with Git and GitHub pull requests for review.

PROJECTS

CodingBuddy | Node.js, Express, React, MongoDB, Socket.io, Docker, Nginx [Live](#) · [Code](#)

- A developer-matching platform with real-time chat. Match ranking is a MongoDB aggregation pipeline over skill overlap; auth is JWT stored in HTTP-only cookies.
- Socket.io chat with typing indicators and read receipts, proxied through Nginx with WebSocket upgrade handling, gzip, and rate limiting.
- Deployed with a multi-stage Dockerfile and a Docker Compose stack running the app, MongoDB, and Nginx together.
- Helmet, CORS, bcrypt and rate-limited auth routes; Winston logging with file rotation; node-cron jobs for stale-request cleanup and daily stats. Five Gemini-backed features on top, including a match explainer and an in-chat code debugger.

ResearchSynthesis AI | React, Flask, Python, LangChain, ChromaDB, MongoDB [Code](#)

- A retrieval-augmented generation tool that answers questions over uploaded PDFs and cites the source passage for each answer.
- Document pipeline: PyPDF text extraction, chunking, and embedding into a ChromaDB vector store for similarity search.
- Flask REST API with MongoDB holding chat history, per-project document sets, and metadata used for filtering retrieval.
- React, Vite and Tailwind frontend with an Axios wrapper that retries failed requests so one dropped call does not end the session.

OneClick Chrome Extension | JavaScript (ES6), Chrome Extension APIs [Code](#)

- Chrome extension that summarises the article on the current page and explains selected code line by line.
- Uses chrome.scripting for content injection, chrome.storage for persisted preferences, and contextMenus for right-click actions.

EDUCATION

University of Engineering and Technology, Peshawar Oct 2022 – Aug 2026

BS Computer Science · CGPA 3.83 / 4.0

Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Computer Networks, Object-Oriented Programming, Software Engineering.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, C++

Frontend: React, Vite, Tailwind CSS, Redux Toolkit

Backend: Node.js, Express, Flask, REST APIs, Socket.io / WebSockets

Databases: MongoDB (Mongoose, aggregation pipelines), MySQL

Infrastructure: Docker, Docker Compose, Nginx, GitHub Actions, Vercel, Git

Also used: LangChain, ChromaDB, Google Gemini API, JWT, Postman, WordPress

AWARDS & CERTIFICATIONS

- 1st Place, Front-End Web Development Marathon, Decentral Developer.
- Meta Front-End Developer Professional Certificate; IBM Full-Stack JavaScript Developer (Coursera).
